

## A B S T R A C T S

"Meteor", official bimonthly circular of the Friendly Society of Amateur Astronomers; published for the amateur observers by the TIT URANIA Observatory /Budapest I., Sánc u. 3/b. Hungary/. Edited by L. Bartha.

Contents /1972/3. No. 9./

In focus: Jupiter and satellites /p.2./

Mars-opozíció 1971. II. /p.4./

An exciting new reserach program: WASEBPRO /D.Van Buren p.6./  
An invitation from the Willingboro Astronomical Society,  
USA, for the observation of eclipsing binaries.

Some interesting variables /L.Bartha - p.8./ U CrB, R Sct and  
AF Cyg.

Plejads-occultation on 19<sup>th</sup> march 1972. /p.9./ Results of the  
observations. Tabl. I.: Name, location and instruments of  
the observers. Tabl. II.: The data of the occultations in  
M.E.T.

A summer program for the meteor-observers /S.Keszthelyi-p.12./  
Occultations /p.12/ Data of 3 occultation.

From the bright phenomenon on the sky /I.Tóth - p.12./ The  
author observed /from Aug. 1970/ 8 unidentified diffuse  
bright phenomena, chiefly on the south-part on the night  
sky. For of them have a connection with short radio-brousts.

The Mercur, during the East-elongation, in March 1972.  
/L.Bartha - p.13./ Drawing of the planet in the TIT Urania  
Obs., from L.Bartha and S.Keszthelyi.

Dychotomy of the Venus /Apr. 1972./ /p.13./ From the inde-  
pendent observations Z. and G. Klausz /Szerencs, 15 cm ref-  
lector/, B. Szabó /Balatonalmádi, 15 cm refl./ and L.Bartha  
/Budapest, 20 cm refractor/, at times of the E-elongation  
of 1972. the dychotomy was late by 2 days in integrated  
light /6<sup>th</sup> April, 1972/.

Some Mira-Variables /S. Keszthelyi and Cs. Mezősi - p.14./  
Data of the min. and max. of o Cet, R UMa, R Cyg, T Cas,  
R Cnc, Chi Cyg, R Peg between Dec. 1971 and Febr. 1972.

Starry sky - occultations /june - july. p. 14-15./

Készült a TIT Sokszorosító üzemében, Budapest VIII., Bródy u.16.
