DANCS, Sz.: **Final stop: ELDORADO. The renewing system of national library services** 43

With support from a project grant a complex system of digital services will have been established in Hungary by the end of October 2014. The system is to going have a major impact not only on the future of the national library, but is expected to represent a breaking point for Hungarian librarianship as a whole. The main purpose of the system called ELDORADO is to provide digital content in a legitimate way, to “revitalize” earlier publications – that are not commercially available and are relegated on library shelves – in a digital format, within a renewing legal environment, adapted to the expectations of digital society. Effective implementation requires a close cooperation between the customer (the National Széchényi Library) and the vendor (the Monguz Ltd.) during the period of almost a year, and makes it inevitable, at the same time, to actively involve library partners and other players (publishers, booksellers, CRMs and gov-

ernment agencies responsible for protecting intellectual property etc.).

AMBERG, E.: **Copyright aspects of the ELDORADO project**.....51

It is the objective of the ELDORADO project to provide users with legitimate access to copyright-protected materials (or those that have been liberated from copyright), in a digital format, using a service system implemented and operating as part of the Hungarian national information and document supply system (i.e. the renewing ODR) within the framework of the ELDORADO project.

DÁVID, A. – TERNAI, Z.: **Scrutiny of Hungarian databases – Bookselling and changing on the Web**57

In the series “Scrutiny of Hungarian databases”, independent experts evaluate various Hungarian online content services from the point of view of their use by libraries.
